

## **XLR to PIP stereo adapter**

This adapter is specifically designed to connect all the stereo and mono Plug in Power microphonones to recorders provided with XLR inputs.

The electronic design prevent noise coming from phantom power and from external interference sources. Two rotary selectors allow the independent setting of bias current for each channel.

The internal circuit is done to reduce power source and combined with a very low noise stabilizer gives a constant current to the Plug in Power microphone.

**NO EXTERNAL POWER REQUIRED** except for the phantom power coming from the recorder.

The low power design greatly reduces the current required.
